Quattro Castella, 22<sup>nd</sup> June 2020

**TO ALL OUR CUSTOMERS**

## INFORMATION CIRCULAR

N. 012020

**Subject : Updating of the installation instruction of ALA SMALTO AETERNUM**

With reference to the previous communication n.012019, containing the indications and installation suggestions in the case of high performance appliances fueled with solid fuels (wood, pellets), we want to inform you of the recent evolution in terms of certification and installation methods of the range in subject.

The novelties are illustrated below.

ALA S.p.A.

For the range  , thanks to the new technical designation

**T600 N1 W V2 L80050 G (800) M WITHOUT GASKET**

it will now be possible to benefit from the condensate resistance W (= wet operating regime) even without the use of gaskets.

- In this configuration, it is necessary to mount the pipes with the "**water**" **anti-condensation installation**, i.e. with male coupling at the bottom and smooth female part at the top (see diagram below).
- It is however possible to install the "**smoke**" **installation**, that is the female part at the bottom and the male connection at the top (method used up to now) only in the presence of a dry operating mode (= dry fumes / high smoke temperature, with the exclusion of condensation phenomena) - installation without gaskets.

**How does the label change ?**

The label will be applied by default \* for the "**water**" **anti-condensation installation**, that is with the smoke arrow from male to female coupling.

\* except material already in stock already produced (label applied "smoke"). In any case, follow the indications of the smoke direction shown on the piece label.

**Declaration of performance DoP**

The related updated DoP is available on [www.ala-spa.it](http://www.ala-spa.it)

---

Finally, we remember that nothing changes in relation to the maximum quality and resistance against corrosion of acid condensates.
